

Aryaka's Managed SD-WAN Extends Alibaba Cloud Across the Globe

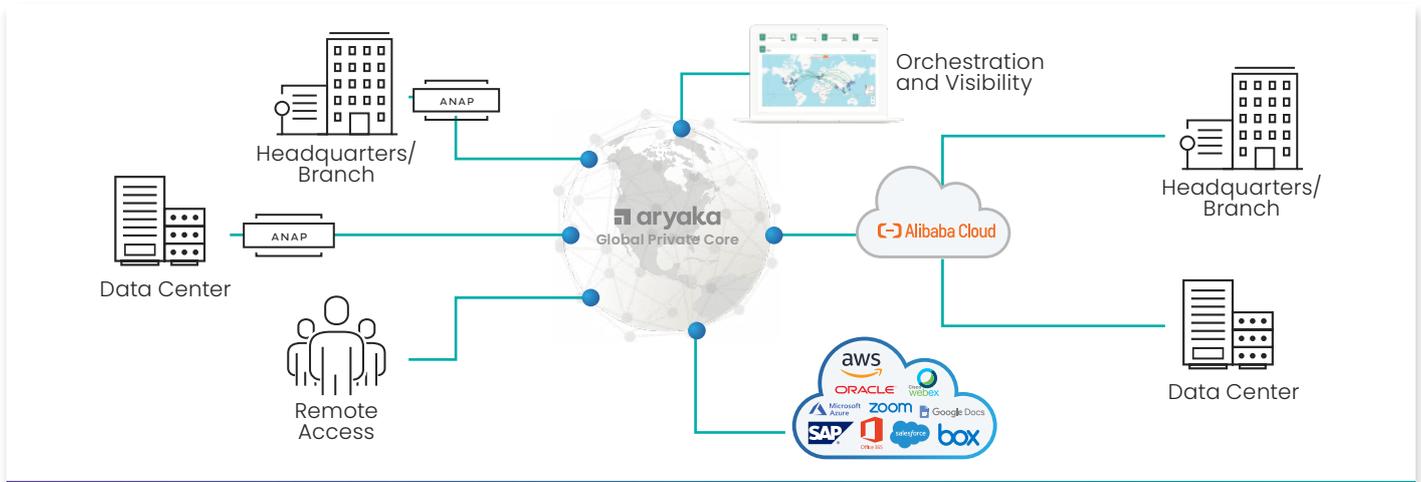

Solution Brief

APAC's and China's #1 Cloud Provider comes together with the World's Best Managed SD-WAN provider to deliver a global SD-WAN to Alibaba Cloud customers.

The partnership enables Alibaba Cloud customers in China, both on-premises and remote, to extend their reach to points outside of China by leveraging Aryaka's global SD-WAN service. Aryaka integrates SLA-driven connectivity and application acceleration, security, WAN optimization, SaaS application access, last-mile management, and global orchestration. Prior to the partnership, customers could have domestic connectivity, but nothing truly end-to-end internationally or with any rock-solid performance guarantees. The same advantages now apply to enterprises based outside of the Alibaba Cloud footprint, where they can now leverage Aryaka's single global WAN as an on-ramp for access into China.

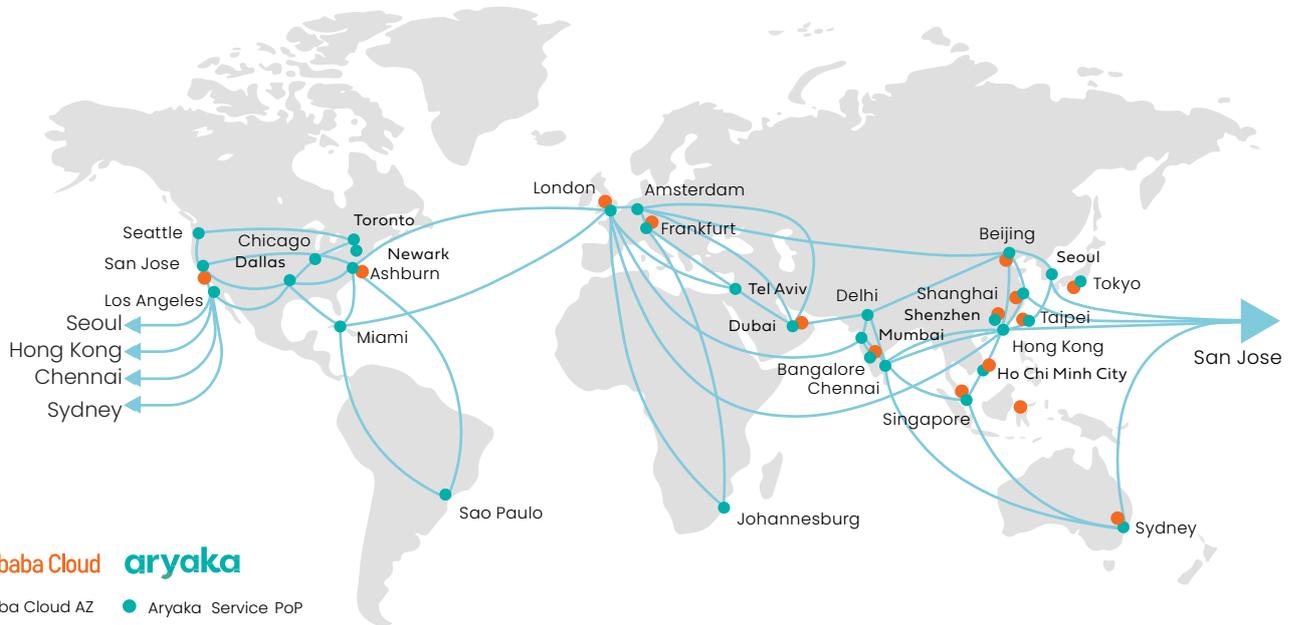

Aryaka, by working with Alibaba Cloud, now has the most complete multi-cloud footprint of any SD-WAN provider, with direct connectivity to Alibaba Cloud, AWS, Azure, Google Cloud, and Oracle.

Only Aryaka SmartServices SD-WAN for Alibaba Cloud delivers:

Fully Managed Service	Optimized Performance	Fast Deployment Globally	Multi-Layered Security
<ul style="list-style-type: none"> Single solution for global multi-cloud connectivity over software-defined Layer 2 core End-to-end reliability SLAs. 99.99% uptime 24x7x365 monitoring and CCIE-level support Zero CapEx, pay as-you-go pricing 	<ul style="list-style-type: none"> Up to 8x Alibaba Cloud performance boost from WAN Optimization anywhere in the world Up to 95% bandwidth and data reduction for fast performance and superior user experience Any-to-any connectivity for all IaaS, SaaS applications 	<ul style="list-style-type: none"> Deploys anywhere in the world in hours Global network of 30+ PoPs puts 95% of the world's business population within 30ms access to applications On-demand site and bandwidth changes 	<ul style="list-style-type: none"> Defense in depth protection for edge, core, and cloud Contained private core network and compartmentalized traffic Options for both network edge and cloud security including virtual firewall support

Alibaba Cloud is recognized by Gartner and IDC as the largest public cloud provider in China and Asia Pacific as of 2019, with 41.7% market share in China and 28.2% across APAC, and they are the 3rd largest public cloud provider globally. Alibaba Cloud has 21 regions and 63 availability zones around the world, servicing over 2.3 million customers. This is now combined with Aryaka’s global Service PoP architecture and ANAPs at the edge for a true end-to-end managed service. Aryaka is recognized by Gartner Peer Insights as a Voice of the Customer for the WAN Edge, the only managed SD-WAN provider with this distinction and testament to the performance and reliability of our global infrastructure.

“By combining Aryaka’s technology with Alibaba Cloud’s robust network infrastructure, customers will be able to achieve unparalleled application performance through this partnership globally and in the China regions.”

- Selina Yuan
President of International Business at Alibaba Cloud Intelligence

“As part of the Alibaba Cloud Partner Network (ACPN) in China, we are proud and excited to be part of the Alibaba Cloud-Aryaka global partnership in delivering a true global SD-WAN solution to customers. Chinese companies with global ambitions can now enjoy best-in-class Alibaba Cloud infrastructure & Aryaka SD-WAN technology at their fingertips.”
