

Global Retailer Displaces MPLS Network & Accelerates Applications by Up to 20x with Aryaka

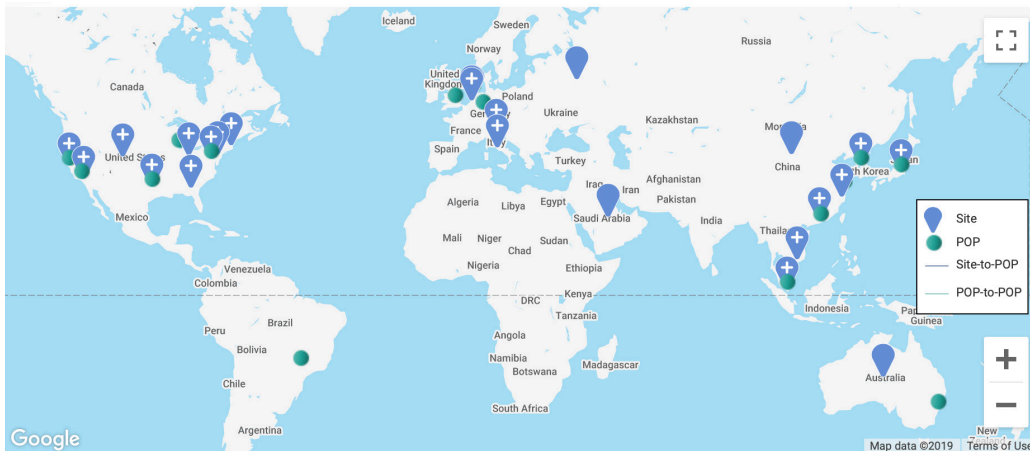

The Challenge

A global footwear retailer needed to transform their wide area network (WAN) and began evaluating alternatives to their expensive MPLS network. The retailer needed a solution that would provide global connectivity without compromising performance. The company also wanted to accelerate access to business critical SaaS applications, like Salesforce and Office365, from every corner of the world, including North America, Asia, Europe and Brazil.

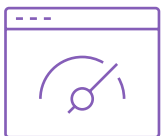

The Solution

After a quick deployment of Aryaka’s managed SD-WAN solution of 20+ sites in under 3 months, the retailer was able to simplify their network from multiple MPLS and WAN optimization box vendors to one vendor: Aryaka. This includes the use of Aryaka’s Last Mile Services, which helped the retailer further consolidate their network and displace their MPLS vendors. The company was also able to deliver seamless, accelerated access to critical applications like Salesforce to all of their global end-users.

RETAILER’S GLOBAL NETWORK
